

REQUEST FOR ACTION (RFA) FORM

GLAST LAT Project
ISOC Peer Review
March 2, 2004

Action Item # _____ 20 _____

Presentation Section/Subject Area: _____ ISOC Role in Instrument H&S _____

SPECIFIC REQUEST:

Specify what other ground system elements will be involved in LAT operations and what their roles and responsibilities will be.

REASON/COMMENT:

It was stated that immediate response to instrument red limit violations for Health & Safety (H&S) will come from the MOC/FOT rather than the ISOC. If the ISOC is relying on the MOC/FOT to respond to instrument H&S problems, these arrangements and their system design implications need to be clearly specified in overall architecture design, and in OAs, ICDs and other places as necessary.
